Profile

Full-stack developer and B.Tech IT student at RGIPT with hands-on experience building and deploying production-grade web applications. Proficient in the MERN stack with a strong foundation in DSA, system design, and real-time communication. GATE 2026 qualified with a track record of delivering scalable solutions.

Education

Rajiv Gandhi Institute of Petroleum Technology <i>B.Tech. in Information Technology (CGPA: 7.90 / 10)</i>	2023 – 2027 <i>Jais, Amethi</i>
Imperial Public School <i>Senior Secondary (Class XII), CBSE — Percentage: 90.00%</i>	2022 <i>Gopalganj, Bihar</i>
Holy Kids International School <i>Secondary (Class X), CBSE — Percentage: 92.00%</i>	2020 <i>Saran, Bihar</i>

Projects

WECode – Full-Stack Competitive Coding Platform Code	2026
Tools & Technologies: React.js, Node.js, Express.js, MongoDB, Redis, Socket.IO, Judge0 API, SendGrid - Built a fully-featured competitive coding platform with 100+ problems, multi-language code execution, real-time test-case feedback, an AI-powered assistant for contextual hints and full solutions, a monetized video solution system accessible on a payment basis, and personal solve history with solution tracking. - Secured the platform using Redis-based token blacklisting and role-based access control, with a dedicated admin dashboard for problem management, video content publishing, and submission analytics monitoring.	
NiteBite – Real-Time Food Ordering Platform Code Live	2025
Tools & Technologies Used: React, Tailwind CSS, Node.js, Express.js, MongoDB, Socket.IO, SMTP - Built a real-time food ordering platform for the institute's night canteen where students place orders, canteen workers verify payment, confirm orders, and mark preparation status - all synchronized live across dashboards using Socket.IO. - Engineered an admin panel for full control over daily item availability and end-to-end order lifecycle management; successfully demoed to institute administration with 150+ users under simultaneous load with zero failures.	
Fake News Detection – ML/NLP Web Application Code	2025
Tools & Technologies Used: React, Flask, Scikit-learn, NLTK, TF-IDF, Python - Built a full-stack application with an NLP pipeline (stopword removal, TF-IDF vectorization) and Logistic Regression model achieving 98.94% accuracy on 9,000+ test samples, served via Flask REST API with a React frontend displaying Fake/Real predictions, confidence scores, history, and comparative model metrics.	

Technical Skills

Languages: C++, JavaScript
Frontend: React.js, Tailwind CSS, Zustand, WebRTC
Backend: Node.js, Express.js, REST APIs, Socket.IO
Databases: MongoDB, Redis
Tools & APIs: Git, GitHub, Postman, Cloudinary, SendGrid, SMTP, Judge0 API, NLTK
Concepts: Data Structures & Algorithms, OOP, Text Classification, TF-IDF Vectorization, Logistic Regression, Naive Bayes

Achievements

- Qualified **Graduate Aptitude Test in Engineering (GATE) 2026** in Computer Science & Engineering.
- Reached **Semi-Finals of Go-BRICs International Hackathon** (Indo-Russia), competing among teams from India and Russia. *(Ongoing)*
- Shortlisted for **The BIG Code by Google**, selected among a few thousand participants nationwide.
- Secured **A+** (highest grade) in Data Structures & Algorithms, Database Management Systems, and Statistical Methods; earned **A** in Operating Systems, Computer Organization & Architecture, Theory of Computation, and Linear Algebra.

Experience

GYANARPAN Community

- * Volunteered weekly alongside peers to provide **free education to underprivileged school students**, conducting structured classes covering core academic subjects for **20–25 students** who lacked formal academic support, fostering **communication, leadership, and social responsibility**.
